StoryCast – Overview

StoryCast retells classic stories as chapters, film and audio. Every story can be watched, listened to or read, with captions and transcripts so everyone can follow along.

Accessibility

Accessibility	Feature breakdown
WCAG 2.1 AA	Was the target standard
Semantic HTML	● Lang was set to en ● One 1 element per page ● Headings are in order. H1, h2, h3 ● Alt text on images ● Labels on buttons
Keyboard support	● Arrow keys move between tabs ● Tab key focus on an element to start the navigation with keyboard arrow keys ● Mor chapters menu works by keyboard and Esc key closes it
Visible focus styles	Work on all interactive elements
Captions and transcripts	● For all audio and videos ● Transcripts can be turned on and off ● When you click to a line in the transcript, it plays the video/audio at that time ● Also when you scroll down, the video will scroll you up to sync the transcripts with the current timestamp of the video/audio where it's playing ● Full text transcript for each video. A user can use it to qoute the video/audio or just read through it.
Responsive layout	● Support for mobile, tablet and desktop ● Tap targets at least 44px ● Usable up to 200% zoom
Reduced motion respected	No autoplay
Colours and spacing	● Consistent color theme ● Consistent spacing ● Consistent font family, size and formatting
